Students and parents are strongly encouraged to carefully discuss and decide on courses requested for the next school year. Careful consideration and selection is critical since school policy does not allow for course changes after initial course requests. Although every effort is made to provide the courses requested, neither your selection nor semester requested is guaranteed (including study halls). Staffing decisions are made and schedules are built based on student course requests. Initial student course selections made during registration will be accommodated whenever possible. Students should use the Four Year Academic Plan document and transcripts from the Infinite Campus Portal to check their credits and graduation requirements before selecting their courses. DIRECTIONS:

- This sheet is to be used along with this Academic Program Guide (APG) and the Course Offering Sheet to write in courses recommended by teachers or requested by students. The APG is also available on line at www.ltsb.org under Academics.
- Have teachers write in recommendations on what course(s) you could take for the following school year. Discuss recommendations with your teacher. Teacher recommendations should focus on your academic ability level and the most appropriate course sequence for you based on your abilities, interests, and post high school plans. **THEIR ARE THEIR RECOMMENDATIONS:**
REQUIRED COURSES.....Specific graduation requirements entered by LTHS
REQUESTED COURSES.....Courses you choose to meet graduation requirements or interests
ALTERNATE COURSES.....Additional courses selected by you to be used by LTHS if one of your requested courses does not run, is cancelled, or ends up as a conflict in your schedule
- Be sure that you have selected enough courses for a seven-period day. Pay attention to courses designated as semester course(s)
- Discuss courses with your parents and obtain their signature on the worksheet. Lunch will automatically be placed in your schedule.
- Finally, you will use this worksheet to enter course codes into the Infinite Campus Portal during the dates the Portal is open.

Calculus AB AP is primarily concerned with developing the student's understanding of the concepts of calculus: functions, graphs and limits, derivatives, and integrals. The course emphasizes a multi-representational approach to calculus with concepts, results, and problems being expressed geometrically, numerically, and verbally. Technology is used regularly by students and teachers to reinforce different representations of functions, to confirm written work, to implement experimentation, and to assist in interpreting results. Calculus AB AP is the equivalent of a semester of college calculus. Students who take this course should plan to take the Calculus AB AP Exam.
