

LIST OF REQUESTED MEDICAL SUPPLIES – NO PUMP

The student should always carry a quick acting glucose source in a pocket or small case such as an eyeglass case.

Unless the physician states in writing that a student is independent in counting carbohydrates, food consumed by the student at school will be labeled by the parent with the grams of carbohydrate. This includes lunch, snacks and food provided at parties. Insulin will be calculated according to the doctor's orders.

Students will be provided a secure place in the health office where their labeled supplies will be kept. Please provide the school with the following:

Blood glucose meter, glucose test strips, and batteries for meter

Lancet device and lancets

Glucose tablets, juice, granola bars, fruit snacks, crackers

Phone number of the student's physician, health care team, and parent(s)

Bottle of insulin and insulin syringes or insulin pens (in case an insulin injection is necessary). Once the bottle is opened it will be sent home since recommended use is within one month of opening according to the insulin manufacturer.

Alcohol wipes

Urine test strips to check for the presence of ketones

Container for supplies (if necessary)
